

Multi-CAD Data Exchange for the Digital Design Enterprise

NX Associative Interface for Abaqus/CAE

Pushbutton associative transfer and updates of parts and assemblies

The **NX Associative Interface (NAI)** is an optional add-on product for the seamless transfer of CAD geometry from NX CAD system to [Abaqus/CAE](#) from SIMULIA. This powerful add-on product allows you to send selected components or an entire assembly from NX to Abaqus/CAE with a single mouse click.

You can modify your model in NX and use the associative interface to quickly update the model in Abaqus/CAE without losing any analysis features assigned to the model. The connection between the applications is provided by a plug-in for NX and established through the CAD Connection toolset in Abaqus/CAE.

The product currently supports NX 5 and NX 6. Prerequisites for this product include Abaqus/CAE 6.10 and the Parasolid translator (both purchased directly from SIMULIA)

Please contact Elysium Sales for more information or to purchase the NAI product:
